Vulnerability Assessment

The Penetrator is a Vulnerability Assessment and penetration testing appliance for your network, which comes pre-loaded and ready-to-use out of the box. It is a powerful, easy to use and intelligent security assessment solution.

60,000 + Vulnerabilities

The Penetrator vulnerability database consists of more than 12 years of research. The database has a total of more than 60,000 unique remote vulnerabilities to test for. This database is updated multiple times daily.

Launch Real Exploits and Denial of Service Attacks

You can launch real exploits to verify that an identified vulnerability is exploitable. It is also possible to launch real Denial of Service attacks to test preproduction systems for stability.

Reports Branding

Branding and personalisation of reports and selling them as a service is permitted.

Unique Distributed Penetrator Capabilities

You can connect multiple Penetrators in a distributed network. This gives many unique advantages such as:
- Centralized reporting
- Centralized vulnerability assessment
- Centralized update point
Possibility to audit different locations from a master Penetrator located in another city.

Security Auditing of any Operating System or Network Device

The Penetrator is designed to audit any operating system or network device. It is beneficial to audit any device in the network setup to find and rectify any identified vulnerabilities before an attacker can exploit the vulnerabilities.

Multi-User Support for Privacy

All Penetrators support multi-user login. This could be used to create different accounts with different targets to audit or resold as (SAAS) to your own customers.

PREVENT HACKERS FROM ENTERING YOUR SERVERS AND NETWORK

Vulnerability Assessment is key to any security strategy

The latest automated hacking tools can inflict damage across a network and across the world in a matter of hours. Understanding the potential vulnerabilities within your system is vital to any security strategy.

√ Non US based 100%
Backdoor Free

√ 11 Scan Profiles,
HIPAA, OWASP top 10,
Prepare for PCI, Firewall
Scan, SCADA and more

√ Advanced Web Crawler -
SQL Injection - XSS - SSL
Vulnerabilities

√ Bugtraq ID / Mitre CVE /
Ubuntu USN / Microsoft /
OSBDB

√ Schedule scans
daily, weekly, monthly

√ Prevent Hackers To Access
Your Server

√ Vulnerability Scanning

√ Vulnerability Assessment

√ 60,000 + Vulnerabilities

√ Launch Real Exploits and
Denial of Service Attacks

√ Distributed Scanning
Capability

√ Scan any OS or Network
device

√ Reports Branding

√ Detailed Remedies for
Identified Vulnerabilities

√ Secure Design All Data
Stored on Unit

√ Ticket System for full
Vulnerability Management

Features

Security Audit Features
- Vulnerability assessment
- 60,000 + vulnerabilities
- Unlimited auditing
- No software installation
- Advanced audit options
- Launch real exploits
- Security audit any OS
- Automatic web crawl script
- OS independent interface
- SANS top 20
- Malware Detection

Easy-to-understand Reporting
- XML PDF and HTML reports
- Reports branding allowed
- Option for syslog remote logging

Distribution Security Auditing
- Security audit remote locations from a centralized point
- Centralized reporting
- Centralized data storage
- Centralized control

Security Audit Configuration
- Virtual host auditing
- Audit specific ports
- Audit specific web directories
- Email notification when an audit is finished

Finds Cross Site Scripting, SQL Injection and Web Errors
- Automatic web crawling engine identifies known and unknown files on websites
- Finds Cross Site Scripting
- Finds SQL Injection
- Finds Web Errors
- Black Hat SEO Scanner
- Google Hack DB

Multi User Support
- Supports multiple users to login at the same time
- Individual user accounts with different audit options and IP ranges
- Individual user security level
- Admin and regular users

Scheduled Auditing
- Automatic scheduled auditing
- Automatic alert about new identified security vulnerabilities
- Shows new vulnerabilities discovered and compares them with old records to show the progress in the security level

Scalable and Upgradeable
- All units can be upgraded for network growth via a software license
- Investment protection

Penetration Testing
- Launch real exploits for Windows, Unix, Routers, Firewalls and more
- Launch real denial of service attacks
- Launch distributed denial of service via distributed setup

Automatic Update
- Automatic daily database updates
- Automatic firmware updates with new features and functionality
- Centralized update point
- Automatic alerts when database is expired
- Option to upload updates manually via the interface

Support & Maintenance
- One year database subscription included
- Full support included in price
- Option for instant replacement hardware
- Web-based user interface (https)
- Quick setup wizard
- Configuration backup/restore
- Email alert and logging via syslog
- Build-in diagnostic function

Security Scanning of:
- Wordpress, Drupal, Magento, Shopify, Umbraco, Joomla, Webshops
